Fund Category	Foreign Large Blend
Funds in Category	689
Funds Inception	February 24, 2012
Close on August 25, 2026	\$63.40
52-Week Range	\$51.91 - \$63.88
10-Day Average Volume	284,259
Shares Outstanding	69.1 Million
Market Capitalization	\$4.4 B
Net Asset Value (8/25/26)	\$63.20
Total Net Assets	\$4.1 B
Gross Expense Ratio	0.25%
Premium/Discount (8/25/26)	0.32%

Strategy

The investment seeks to track the investment results (before fees and expenses) of the S&P World Ex-U.S. Momentum Index. •• The fund will invest at least 90% of its total assets in the securities that comprise the underlying index. Strictly in accordance with its guidelines and mandated procedures, the index provider compiles, maintains and calculates the underlying index, which is composed of constituents of the S&P World Ex-U.S. Index.

The Morningstar Star Rating™ for funds is calculated for management investment company products registered under the Investment Company Act of 1940 (including mutual funds, exchange-traded funds and closed-end funds) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are analyzed as a single product category for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star.

Risk Analysis

as of 07/31/26

LOW	Moderate	HIGH	IDMO	Category
			Standard Deviation	13.08
			Sharpe Ratio	1.41
			Mean	24.69
				15.95

Over the last 3 years, the IDMO fund offered excellent risk and return characteristics, with a positive Alpha and a Sharpe Ratio of 1.41.

Glossary

Alpha A measure of the difference between a fund's actual returns and its expected performance, given its level of risk as measured by beta.

% Assets in Top 10 Holdings The aggregate assets, expressed as a percentage, of the fund's top 10 portfolio holdings.

Average Annual Returns Expressed in percentage terms, Morningstar's calculation of total return is determined each month by taking the change in monthly net asset value, reinvesting all income and capital-gains distributions during that month, and dividing by the starting NAV.

Beta A measure of a fund's sensitivity to market movements.

Book Value Growth The book value growth rate for a U.S. stock is a measure of how the stock's book value per share (BVPS) has grown over the last five years.

Cash Flow Growth The cash flow growth rate for a stock is a measure of how the stock's cash flow per share (CFPS) has grown over the last three to five years.

Category The Morningstar Category identifies funds based on their actual investment styles as measured by their underlying portfolio holdings (portfolio and other statistics over the past three years).

Country Exposure Displays the countries in which the fund invests most heavily. This information is gathered from fund companies and is the most recent data available.

Dividend Yield Dividend yield (projected) for a stock is the percentage of its stock price that a company is projected to pay out as dividends.

Gross Expense Ratio The gross expense ratio reflects the amount of money a fund charges every year for management, administration, and marketing - expressed as a percentage of total net assets. It does not include any fee waiver or expense reimbursement agreements that may be in effect.

Historical Earnings Growth The historical earnings growth rate for a stock is a measure of how the stock's earnings per share (EPS) has grown over the last five years.

Long % The percentage of long positions in the mutual fund portfolio. Long positions involve buying a security outright and then selling it later, with the hope that the security price rises over time.

Long-Term Earnings Growth The long-term projected earnings growth rate for a stock is the average of the available third-party analysts' estimates for three- to five-year EPS growth.

Market Capitalization The current stock-market value of a company's equity, in millions.

Market Value Returns An exchange-traded fund's total return based on market prices, as opposed to NAV.

Mean Represents the annualized total return for a fund over 3-, 5-, and 10-year time periods.

Morningstar Return An annualized measure of a fund's load-adjusted excess return relative to the return of the 90-day Treasury Bill over a three-, five-, or ten-year period. This is a component of the Morningstar Risk-Adjusted

Return.

Morningstar Risk An annualized measure of a fund's downside volatility over a three-, five-, or ten-year period. This is a component of the Morningstar Risk-Adjusted Return.

NAV Returns Expressed in percentage terms, Morningstar's calculation of total return is determined each month by taking the change in monthly net asset value, reinvesting all income and capital-gains distributions during that month, and dividing by the starting NAV.

Net % The percentage difference between the Long % and Short %.

Net Asset % The % Net Assets indicates the weight of each security in the portfolio.

Net Asset Value (NAV) This is the net asset value for a fund. It is calculated by dividing the total net assets of the fund by the total number of shares.

Premium/Discount The annual average premium or discount of the market price to the NAV (Net Asset Value), expressed as a percentage of the NAV

Price/Book Ratio - Projected Price/book (projected) for a stock is the ratio of the company's most recent month-end share price to the company's estimated book value per share (BPS) for the current fiscal year.

Price/Cash Flow Ratio - Projected Price/cash flow (projected) for a stock is the ratio of the company's most recent month-end share price to the company's estimated cash flow per share (CPS) for the current fiscal year.

Price/Prospective Earnings Price/projected earnings for a stock is the ratio of the company's most recent month-end share price to the company's estimated earnings per share (EPS) for the current fiscal year.

Price/Sales Ratio - Projected Price/sales (projected) for a stock is the ratio of the company's most recent month-end share price to the company's estimated sales per share (SPS) for the current fiscal year.

R Square Reflects the percentage of a fund's movements that can be explained by movements in its benchmark index.

Regional Weighting This data set provides a breakdown of the geographical exposure of a fund's stock assets.

Return after Taxes on Distributions A tax-adjusted total return that is based on a few assumptions: 1) The investor does not sell the holding at the end of the time period. 2) Distributions are taxed at the highest federal tax-rate prevailing and then reinvested. 3) State and local taxes are excluded. 4) Only the capital gains are adjusted for tax-exempt funds, because the income from these funds is nontaxable. This datapoint follows the guidelines established by the SEC in the spring of 2001 for reporting after-tax performance. Besides the tax-adjustment, this total return is also adjusted for the effects of sales loads per the SEC's recommendation.

Return after Taxes on Distributions and Sale A tax-adjusted total return that is based on a few assumptions: 1) The investor sells the holding at the end of the time period and pays capital gains taxes on any appreciation in price. 2) Distributions are taxed at the highest federal tax-rate

prevailing and then reinvested. 3) State and local taxes are excluded. 4) Only the capital gains are adjusted for tax-exempt funds, because the income from these funds is nontaxable. This datapoint follows the guidelines established by the SEC in the spring of 2001 for reporting after-tax performance. Besides the tax-adjustment, this total return is also adjusted for the effects of sales loads per the SEC's recommendation.

Sales Growth The sales growth rate for a stock is a measure of how the stock's sales per share (SPS) has grown over the last five years.

Sector Weightings Calculated for all stock and bond funds based on the securities in the fund's most recent portfolio.

Sharpe Ratio A risk-adjusted measure developed by Nobel Laureate William Sharpe. It is calculated by using standard deviation and excess return to determine reward per unit of risk.

Short % The percentage of short positions in the mutual fund portfolio. To establish a short stock position, the portfolio manager borrows shares of stock from another party, sells the shares and receives cash. The manager is then obligated to buy the stock and return the shares at some point in the future. Short positions produce negative exposure to the security that is being shorted.

Standard Deviation A statistical measurement of dispersion about an average, which, for a mutual fund, depicts how widely the returns varied over a certain period of time.

Tax Cost Ratio The Tax-Cost Ratio for a fund is a comparison of pre-tax and after-tax returns. It is the percent of assets that an investor loses to taxes.

Total Net Assets The month-end net assets of the mutual fund, recorded in millions of dollars.

Total Return Percentile Rank This is the fund's total-return percentile rank relative to all funds that have the same Morningstar Category.

Turnover Ratio This is a measure of the fund's trading activity which is computed by taking the lesser of purchases or sales (excluding all securities with maturities of less than one year) and dividing by average monthly net assets.

Important Information About This Report

Exchange-traded funds (ETFs) are subject to risks similar to those of other diversified portfolios. Although ETFs are designed to provide investment results that generally correspond to the performance of their respective underlying indices, they may not be able to exactly replicate the performance of the indices because of expenses and other factors. Also, there are brokerage commissions associated with trading ETFs that may negate their low management fees. ETFs are required to distribute portfolio gains to shareholders at year end. These gains may be generated by portfolio rebalancing or the need to meet diversification requirements. ETF trading will also generate tax consequences.

Expense ratios are provided by Morningstar and are based on information obtained from the mutual fund's last audited financial statement. Current expense ratios for the funds may be different.

Yield is a measure of the fund's income distributions, as a percentage of the fund price. Morningstar calculates this figure by summing the income distributions over the trailing 12 months and dividing that by the sum of the last month's ending NAV plus any capital gains distributed over the 12-month period.
